To Whom It May Concern,

I am writing to provide my highest recommendation for **Abhishek Uniyal**. Having worked closely with him at Abridged - Collab.Land, I can attest to his outstanding capabilities, particularly in Developer Relations and Data Engineering.

As a key contributor to our Developer Relations initiatives, Abhishek produced comprehensive API and SDK documentations and created tutorials that greatly enhanced our developer onboarding process. He was instrumental in assisting third-party developers to contribute mini-apps to the Collab.Land marketplace, fostering a vibrant developer community around our platform.

In addition to his DevRel achievements, he made significant contributions in data engineering. He implemented data tracking systems and developed end-to-end data pipelines for analytics, creating dashboards that improved decision-making across departments. His integration of AI tools enabled non-technical team members to independently query data, greatly enhancing our operational efficiency.

Abhishek brings energy, enthusiasm, and a collaborative spirit to every project. His ability to combine his technical expertise with his passion for helping developers is what makes him an exceptional asset to any team. I am confident that he will be a valuable addition to your organization.

Sincerely,

Ekene Eze
